Questo volume ha l'obiettivo di chiarire a studenti e professionisti come l'approccio BIM rivoluzioni non solo la concezione stessa del progetto, fornendo sempre più importanza alle informazioni correlate al bene edilizio, ma evidenzi inoltre un cambiamento metodologico, che sta modificando la gestione del processo, come sottolineato anche dalla normativa internazionale ISO 19650-1:2018. Per effettuare tale cambiamento, le stazioni appaltanti, in particolare quelle pubbliche, devono impostare una corretta gestione dell'intervento, tenendo a mente l'importanza dei dati nelle fasi di vita del bene edilizio. Attraverso questa evoluzione, anche le piccole committenze possono impostare metodologicamente un corretto processo BIM oriented. La digitalizzazione del settore AECO comporta la necessità di cambiare il paradigma che ancora in questi anni è stato prepotentemente proposto, ovvero passare dalla presunta centralità del progetto alla centralità della domanda.

Questa edizione italiana del testo di riferimento internazionale sul BIM è nata dall'esigenza, condivisa con gran parte del mondo della progettazione e produzione edilizia, di fornire al panorama della committenza pubblica o privata, delle professioni e delle imprese, un volume che fosse capace di mettere in evidenza la grande novità rappresentata dall'adozione del BIM all'interno dei propri processi ideativi, produttivi e gestionali. Nella prima parte il volume affronta le tematiche relative alla gestione contrattuale del settore delle costruzioni e di come l'introduzione del BIM stia spostando l'attenzione degli attori su processi collaborativi; esamina quindi tutto l'apparato tecnologico (hardware e software) in termini di interoperabilità e di piattaforme BIM. I capitoli successivi riguardano rispettivamente i proprietari o i gestori dell'edificio, i progettisti, le imprese esecutrici e infine i subappaltatori e i fornitori; questi capitoli evidenziano gli sforzi richiesti dallo sviluppo del BIM all'interno dei processi aziendali, i possibili elementi di resistenza, ma soprattutto permettono di intravedere le ottimizzazioni di quegli elementi di scarsa produttività che la gestione tradizionale mantiene fortemente in essere. Un intero nuovo capitolo introduce l'importante punto di vista offerto dagli autori su come il BIM sia destinato a modificare questo settore nel breve e nel medio termine, cui fa seguito un capitolo che presenta il livello di diffusione del BIM nei diversi continenti, riportando una scheda riepilogativa per paese da cui è possibile estrarre sia norme tecniche sia report applicativi o linee guida. L'ultimo capitolo offre, tra gli altri, alcuni casi studio afferenti alla realtà italiana, a riprova dell'attenzione che anche nel nostro Paese va rivolgendosi nei confronti del BIM.

This open access book focuses on the development of methods, interoperable and integrated ICT tools, and survey techniques for optimal management of the building process. The construction sector is facing an increasing demand for major innovations in terms of digital dematerialization and technologies such as the Internet of Things, big data, advanced manufacturing, robotics, 3D printing, blockchain technologies and artificial intelligence. The demand for simplification and transparency in information management and for the rationalization and optimization of very fragmented and splintered processes is a key driver for digitization. The book describes the contribution of the ABC Department of the Polytechnic University of Milan (Politecnico di Milano) to R&D activities regarding methods and ICT tools for the interoperable management of the different phases of the building process, including design, construction, and management. Informative case studies complement the theoretical discussion. The book will be of interest to all stakeholders in the building process - owners, designers, constructors, and faculty managers - as well as the research sector.

In a fascinating analysis of critical themes in Feodor Dostoevsky's work, René Girard explores the implications of the Russian author's "underground," a site of isolation, alienation, and resentment. Brilliantly translated, this book is a testament to Girard's remarkable engagement with Dostoevsky's work, through which he discusses numerous aspects of the human condition, including desire, which Girard argues is "triangular" or "mimetic" copied from models or mediators whose objects of desire become our own. Girard's interdisciplinary approach allows him to shed new light on religion, spirituality, and redemption in Dostoevsky's writing, culminating in a revelatory discussion of the author's spiritual understanding and personal integration. Resurrection is an essential and thought-provoking companion to Dostoevsky's Notes from the Underground.
