This Book Evolved Itself Out Of 25 Years Of Teaching Experience In The Subject, Moulding Different Important Aspects Into A One Year Course Of Mechanism And Machine Theory. Basic Principles Of Analysis And Synthesis Of Mechanisms With Lower And Higher Pairs Are Both Included Considering Both Kinematic And Kinetic Aspects. A Chapter On Hydrodynamic Lubrication Is Included In The Book. Balancing Machines Are Introduced In The Chapter On Balancing Of Rotating Parts. Mechanisms Used In Control Namely, Governors And Gyroscopes Are Discussed In A Separate Chapter. The Book Also Contains A Chapter On Principles Of Theory Of Vibrations As Applied To Machines. A Solution Manual To Problems Given At The End Of Each Chapter Is Also Available. Principles Of Balancing Of Linkages Is Also Included. Thus The Book Takes Into Account All Aspects Of Mechanism And Machine Theory To The Reader Studying A First Course On This Subject. This Book Is Intended For Undergraduate Students Taking Basic Courses In Mechanism And Machine Theory. The Practice Of Machines Has Been Initially To Use Inventions And Establishment Of Basic Working Models And Then Generalising The Theory And Hence The Earlier Books Emphasises These Principles. With The Advancement Of Theory Particularly In The Last Two Decades, New Books Come Up With A Stress On Specific Topics. The Book Retains All The Aspects Of Mechanism And Machine Theory In A Unified Manner As Far As Possible For A Two Semester Course At Undergraduate Level Without Recourse To Following Several Text Books And Derive The Benefits Of Basic Principles Recently Advanced In Mechanism And Machine Theory.

The International Symposium on the History of Machines and Mechanisms is the main activity of the Permanent Commission (PC) for the History of Mechanism and Machine Science (HMM) of the International Federation for the Promotion of Mechanism and Machine Science (IFTOMM). The first symposium, HMM2000, was initiated by Dr. Marco Ceccarelli and was held at the University of Cassino (Cassino, Italy) on May 11 – 13, 2000. The second symposium, HMM2004, was chaired by Dr. Marco Ceccarelli and held at the same venue on May 12 – 15, 2004. The third symposium, HMM2008, was chaired by Dr. Hong-Sen Yan and held at the National Cheng Kung University (Tainan, Taiwan) on November 11 – 14, 2008. The mission of IFTOMM is to promote research and development in the field of machines and mechanisms by theoretical and experimental methods, along with their practical applications. The aim of HMM2008 is to establish an international forum for presenting and discussing historical developments in the field of Mechanism and Machine Science (MMS). The subject area covers all aspects of the development of HMM, such as machine, mechanism, kinematics, design method, etc., that are related to people, events, objects, anything that assisted in the development of the HMM, and presented in the forms of reasoning and arguments, demonstration and identification, and description and evaluation.

This book meets the requirements of undergraduate and postgraduate students pursuing courses in mechanical, production, electrical, metallurgical and aeronautical engineering. This self-contained text strikes a fine balance between conceptual clarity and practice problems, and focuses both on conventional graphical methods and emerging analytical approach in the treatment of subject matter. In keeping with technological advancement, the text gives detailed discussion on relatively recent areas of research such as function generation, path generation and mechanism synthesis using coupler curve, and number synthesis of kinematic chains. The text is fortified with fairly large number of solved examples and practice problems to further enhance the understanding of the otherwise complex concepts. Besides engineering students, those preparing for competitive examinations such as GATE and Indian Engineering Services (IES) will also find this book ideal for reference. **KEY FEATURES** Exhaustive treatment given to topics including gear drive and cam follower combination, analytical method of motion and conversion phenomenon. Simplified explanation of complex subject matter. Examples and exercises for clearer understanding of the concepts.

This updated and enlarged Second Edition provides in-depth, progressive studies of kinematic mechanisms and offers novel, simplified methods of solving typical problems that arise in mechanisms synthesis and analysis - concentrating on the use of algebra and trigonometry and minimizing the need for calculus.;It continues to furnish complete coverage of: key concepts, including kinematic terminology, uniformly accelerated motion, and the properties of vectors; graphical techniques for both velocity and acceleration analysis; analytical techniques; and ready-to-use computer and calculator programmes for analyzing basic classes of mechanisms.;This edition supplies detailed explications of such new topics as: gears, gear trains, and cams; velocity and acceleration analyses of rolling elements; acceleration analysis of sliding contact mechanisms by the effective component method; four-bar analysis by the parallelogram method; and centre of curvature determination methods.
