equilibrium systems covers a large variety of situations that are often without apparent connection. This book proposes a unified perspective on the whole set of systems near equilibrium: it brings out the profound unity of the laws which govern them and gathers together a large number of results usually fragmented in the.

Nonequilibrium Statistical Physics: Linear Irreversible ...

Non-equilibrium thermodynamics is a branch of thermodynamics that deals with physical systems that are not in thermodynamic equilibrium but can be described in terms of variables that represent an extrapolation of the variables used to specify the system in thermodynamic equilibrium. Non-equilibrium thermodynamics is concerned with transport

conserving systems can achieve the value $\mathcal{Q}=1/2$, which is the universal upper bound in linear response.

Phys. Rev. E 102, 040103(R) (2020) - Power, efficiency ...

Why Irreversible ¶ The reason that a system is irreversible is because we've lost information. In other words, the correlation function of time is short as the any system would be coupled to the reservoir. So any system would transfer information in and out into the reservoir and the information just dissipates deep into the reservoir.

*Important Questions of Statistical Mechanics
– Statistical ...*

Irreversible thermodynamics is a division of physics which studies the general regularities in transport phenomena (heat transfer, mass transfer, etc.) and their relaxation (transition from nonequilibrium systems to the thermodynamical equilibrium state).

IRREVERSIBLE THERMODYNAMICS – Thermopedia

The non-equilibrium statistical thermodynamics aims to describe, in a
