Plant Breeding Matters. A joint initiative between BSPB and the major UK farming unions (NFU, NFUS and UFU), the FAIR PLAY campaign was established in 2005 to address concerns that evasion of farm-saved seed payments was draining vital income away from investment in UK-based plant breeding. The central objective of the FAIR PLAY campaign is to create a level playing-field in which all farmers contribute fairly for the benefits of using farm-saved seed, so safeguarding future investment in ...

Food systems around the world face a triple challenge: providing food security and nutrition for a growing global population; supporting livelihoods for those working along the food supply chain; and contributing to environmental sustainability. Better policies hold tremendous promise for making progress in these domains.

Recent mergers in the seed industry have led to concerns about market concentration and its potential effects on prices, product choice, and innovation. This study provides new and detailed empirical evidence on the degree of market concentration in seed and GM technology across a broad range ...

The book contains research articles and reviews recently published online for the MDPI journal Diversity, in the Special Issue "Genetic diversity of soil bacterial communities". The issue aimed to collect up to date information from the international scientific community to get insight in the "black box", as soil has been defined in the last decades, focusing in detail on the role that the microbial communities have in soil processes such as carbon and nutrient fluxes and on their genetic and functional diversity. The book meets the interests of scientific communities directly involved in the topics investigated, as well as of PhD students, scholars, professional organizations interested in improving their knowledge on a group of organisms considered vitally important to the maintenance and sustainability of the

biosphere, where soil has a key role as an important natural resource.

Recent mergers in the seed industry have led to concerns about market concentration and its potential effects on prices, product choice, and innovation. This study provides new and detailed empirical evidence on the degree of market concentration in seed and GM technology across a broad range of crops and countries, and analyses the causes and potential effects of concentration. It also explains how competition authorities have responded to mergers, and suggests policy options to help safeguard and stimulate competition and innovation in plant breeding by avoiding unnecessary regulatory barriers, by facilitating access to

genetic resources and intellectual property, as well as by stimulating public and private R&D. As this study shows, policy makers have several levers besides competition policy to ensure an innovative and competitive seed industry.

This report examines the ethical and social issues associated with the development and cultivation of genetically modified (GM) crops, particularly in relation to: the scientific background and techniques used in genetic modification; the potential of GM crops; commercial and legal implications; implications for the developing world; consumer concerns; environmental concerns; regulation and policy issues.

This book provides a synthesis of the key issues and challenges facing agriculture and food production in Southern Africa. Southern Africa is facing numerous challenges from diverse issues such as agricultural transformations, growing populations, urbanization and climate change. These challenges place great pressure on food security, agriculture, water availability and other natural resources, as well as impacting biodiversity. Drawing on case studies from Lesotho, Malawi, Mozambique, Namibia, South Africa, Swaziland, Tanzania, Zambia and Zimbabwe, the chapters in this book consider these challenges from an interdisciplinary perspective, covering key areas in constraints to production, the most important building blocks of good farming practices,

## Read Online Plant Breeding Matters Bspb

and established and emerging technologies. This book will be a valuable support for informing new policies and processes aimed at improving food production and security and developing sustainable agriculture in Southern Africa. This informative volume will be key reading for those interested in agricultural science, African studies, rural studies, development studies and sustainability. It will also be a valuable resource for policymakers, governmental and nongovernmental organizations, and agricultural practitioners.

The theme of this book evolved from the idea of linking three concepts around food: traceability, ethics and informed choice. We believe that the current development and implementation of traceability in the agri-food sector offers an

## Read Online Plant Breeding Matters Bspb

interesting way not only of handling food safety but also of addressing and communicating ethical issues arising from current food production practices. Practices in the agri-food sector worry food consumers (as we all are, since we need to eat and drink to stay alive). But how can consumers act upon their concerns? Paradoxically, although consumers are bombarded with information on food – from the media, the food industry, food authorities, NGOs and interest groups – details about how foods are actually produced is often hard to find. Much of the information available is superficial, conflicting or partial, and it is hard for consumers seeking to make informed food choices to know which information to trust. The consumers we interviewed for this project felt that information about food products was withheld and manipulated.

## Read Online Plant Breeding Matters Bspb

Traceability, which provides a record of the history and journey of a given food, and which is increasingly used in the food sector for legal and commercial reasons, has the potential to communicate a more authentic picture of how food is produced.
