Process Dynamics And Control Solution

Step-by-step solution:

There are three
important process
variables in a process
control system.

Feedback control
system measures the

controlled variable and compares the measured value with the desired value and then adjusts the manipulated variables for the control of the system accordingly.

Dynamics

The dynamic behaviour and automatic control of processes are studied.

Mathematical tools for analyzing the transient behaviour of open and closed-loop systems are presented. The steps of controller development are treated: process characterization (using mathematical models), controller design, and
