This is a review of the book construction itself. Schroeder's book is great, but the current printings (yes, the main hardcover edition, ISBN 9780201380279) are suffering from sub-par printing quality. Older printings used a high quality glossy paper. The current printings use a thicker matte paper, adding bulk to the book as a whole.

= N (7) Schroeder asks us to prove that for a system in thermal and diffusive equilibrium with a reservoir, F tends to decrease. I suspect he would use a derivation similar to that leading up to his equation 5.29 for F , but as I don't trust that method, I'll use the method that deals with the total entropy of the system.

equation (in other words, a solution for $t \neq 1$). Use this equation to obtain the time evolution $\langle N_1 \rangle_t$ of the average value of N_1 . Compare this analytical form with the results of your simulations. *** Note that $\langle N_1 \rangle_t = \sum_{N_1} N_1 P(N_1; t)$: Using the stochastic equation, it is easy to see that $\langle N_1 \rangle_{t+\Delta t} = \langle N_1 \rangle_t + \Delta t \left(\frac{1}{2} \langle N_1 \rangle_t^{-1} - \frac{1}{2} \langle N_1 \rangle_t \right)$; which leads to ...
